

Weekly Training Plan

Wednesday weekly meeting · Daily huddle structure · Item of the Week · Estimate building · Flip credit standards · IAQ install lab

FOCUS Building Estimates & Flip Credits	FORMAT Whiteboard · Role-Play · Hands-On	FIELD LAB Chris leads IAQ install · shop
---	--	--

1 · Tools & Materials

Item	Use
Sticky pads (one per tech)	Pass out at start of meeting · take notes throughout
Whiteboard	Build expectations + flip credit checklist live with the team
Inspection sheets (printed, signature line)	Used in fake-call role-plays + flip credit conversation
Demo IAQ kit (at shop)	Chris-led install lab — actual unit to mount + wire

2 · Daily Huddles — Structure & Main Focus

Open the floor: ask the team what’s working in their current huddle format and what they’d change. Use the whiteboard to capture suggestions in real time.

Block	Time	Owner
Yesterday's wins + losses (numbers on the board)	2 min	Manager
Today’s main focus / theme (one line)	1 min	Manager
Round the room — what’s on each tech’s schedule + needs	4 min	Each tech
Item of the Week reminder + leaderboard standing	1 min	Manager
Suggestions / open floor	2 min	Anyone

3 · Item of the Week — Leaderboard Reward

Last week's leaderboard winner picks the Item of the Week.

Mon – Fri, the team competes to sell the most of that item. The pick can be any of:

- a specific repair, accessory, or option line
- memberships (count of memberships sold)
- 5-star reviews collected

Winner of the Item of the Week is announced at next Wednesday's meeting and picks the following week's item.

4 · Expectations for Every Service Call

Whiteboard exercise — ask everyone to call these out before listing them. Anything they don't name, walk through together.

Required on every call	What "done right" looks like
Pictures	Before / during / after of the actual problem area, with the unit tag visible
Stickers	Snappy decal on the equipment + service tag updated
Inspection sheet (signed)	Every box checked or marked N/A · homeowner signature required
Estimates	Built in ServiceTitan with all 4 option tiers when applicable (see below)
Call summary	If no estimate was built: what was found, what was recommended, and what declining means for the customer

5 · Building Estimates — Fake-Call Role-Play

Pair techs up and run mock calls. Each tech has to build all four option tiers in ServiceTitan in front of the room. Group critiques the wording, the order, and the dollar logic.

#	Option Tier	Goal of this tier	Wording cue
1	Repair Options	Solve only the immediate failure. Cheapest path back to operational.	"What it costs to make it run today — no more, no less."
2	Repair + Enhancements	Repair plus the next 1–2 components most likely to fail soon.	"While we're in here, here's what we should handle before it leaves you stuck again."

#	Option Tier	Goal of this tier	Wording cue
3	Big Boy / Top Option	Full system or major capital replacement done right.	"If this were my house, here's exactly what I'd do once and never touch again."
4	Schedule the Flip	Customer is on a system that's not worth repairing. Book a Comfort Consultation.	"It doesn't make sense to pour money into this. Let's have a free consultation Friday."

6 · Flip Credit — \$25 Bonus Standard

Every tech earns **\$25** per properly-built flip lead handed to sales. Whiteboard exercise: ask the team what makes a "proper flip" before listing the requirements below.

What's required for the \$25 credit	Detail
Inspection sheet (signed)	Every section completed, homeowner signature on the line. No signature = no credit.
Proper estimate built	All 4 option tiers in ServiceTitan when applicable. Estimate physically presented + walked through with the homeowner (not just emailed afterward).
Pictures	Of the failing system, model/serial tag, indoor coil condition, and any safety concerns. Reviewed with the homeowner on-site.
Dollar-amount conversation	Tech explicitly explains the \$ threshold where repair stops being worth it on their system — i.e. why a flip is the responsible move, not just an upsell.
Lead scheduled + booked	Comfort Consultation on the calendar before the tech leaves. Confirmation email sent to the customer the same day.

Coaching line: "Talk about the dollar amount it takes to justify a proper flip." Every tech should be able to say out loud, on the call, what number turns repair into replacement.

7 · Field Lab — IAQ Installation at Shop

Chris leads the IAQ install lab at the shop this week.

Every tech rotates through the install bench. Goals:

- Proper mount location relative to airflow direction
- Wiring to existing low-voltage circuit
- Sealing + drain considerations
- Customer-facing explanation: "what this does and why it matters"

Pass-off: each tech does one full install on their own with Chris signing off. Counts toward IAQ skill tag in Matrix.

8 · Week at a Glance

Day	Focus	Owner
Wed 5/13	Weekly meeting · cover all sections above · pick Item of the Week	Maico

Day	Focus	Owner
Thu 5/14	Daily huddle (new structure) · fake-call estimate building drill #1	Maico
Fri 5/15	Daily huddle · flip credit checklist review · IAQ lab session A	Maico + Chris
Mon 5/18	Daily huddle · Item of the Week kickoff · IAQ lab session B	Maico + Chris
Tue 5/19	Daily huddle · fake-call estimate drill #2 (flip scenarios)	Maico
Wed 5/20	Next weekly meeting · announce Item of the Week winner · debrief flip credits earned	Maico

9 · Where This Plugs Into Snappy Matrix (Pending Approval)

Matrix surface	What gets added when you approve
Training Library	This document filed under "Week of 5/13/26" — printable + searchable
Bulletin Board	Banner: "Item of the Week — picked by last week's leaderboard winner"
Dispatch / Skills	New skill tag: "IAQ Install Lead" — assigned to Chris this week; tech passes earn the IAQ install tag
Payout / Credits	New credit type: "Flip Credit (\$25)" — added to weekly bonus tab when a tech meets all 5 requirements
Composite scoring	Item-of-the-Week winner gets a champion entry that contributes to the weekly performance bonus
