

Setting Proper Leads & Flips

Instructor Flight Plan · Wednesday May 6, 2026 · 45 min · whole team

Audience	All 6 techs (Dewone, Chris, Benji, Daniel, Dee, Nick) + Brayden Bond (Sales)
Facilitator	Mark Sanders (Maico) — Manager
Co-presenter	Brayden Bond — speaks during Section 4 (Handoff) and Section 6 (Pay Impact)
Materials	Lead vs Flip Definition Card (1-page, print 8 copies). Whiteboard. ServiceTitan demo on laptop. Slack #installs channel open.
Goal	Common language across the team. Every tech leaves able to qualify on-call and execute the FLIP handoff without thinking.

Open with the hook

Read this verbatim or in your own words. Don't soft-pedal the number — the gap is real.

"In April we generated 39 tech leads. Only 10 converted to installs. That's 26%. Industry top-quartile is 40-plus. The gap isn't that we don't find opportunity — we do. The gap is what happens between finding it and Brayden showing up. That's what today is about."

Facilitator tip: Pause for 5 seconds after "Industry top-quartile is 40-plus." Let it land. Don't fill the silence.

1 · Definitions — set the language

Talking points

- Hand out the Lead vs Flip Definition Card. Everyone gets one to pin in their van.
- LEAD = info captured. Customer is not ready today. Tech captures name, phone, address, issue, system age. Brayden follows up later in his queue.
- FLIP = appointment booked. Brayden is actively dispatched while the tech is still on-site or same-day. Tech holds the customer.
- Both count toward Tech-Generated Leads (TGL) on the scorecard. Only FLIPs that close count toward install self-sourced credit.
- If you walk away without one of those two outcomes, you walked away from money.

Facilitation

Ask the room: "Without looking at the card — what's the difference?" Call on 2 techs by name. If anyone fumbles, repeat the answer cleanly. This is the core vocabulary; it has to be automatic.

2 · The 5-step qualifying script

Talking points

- These are the five questions you ask on every service call where the system is 8+ years old or there's a comfort complaint.
- 1. System age + condition. Look at the nameplate. Note R-22 / obsolete refrigerant. Mentally score: "Could this fail this summer?"
- 2. "How long are you planning to stay in this home?" 5+ years = strong signal. Listing soon = different conversation (still capture as a lead).
- 3. Comfort or utility-bill pain. "How are the upstairs rooms staying with the heat coming?" "What's the summer power bill running?" Pain = budget unlocked.
- 4. Budget signal. Soft test: "If we could solve this for you today, is that something you'd want to look at?" Listen for the response, not just yes/no.
- 5. Decision-maker present. If only one spouse is home and they say "I'd have to talk to my husband/wife" — that's a LEAD, not a FLIP.
- The rule: 4 of 5 hit → FLIP it. Don't overthink. Slack Brayden before you leave the driveway.

Facilitation

Whiteboard the 5 steps. Have each tech call them out from memory before moving on. Don't move forward until everyone in the room can recite them.

3 • Qualifying checklist (the deeper read)

Talking points

- The 5-step script is the on-call version. The full checklist is what you mentally cross-reference when the script gets a yellow light.
- System indicators: 10+ years old · repeat repair history · R-22 or obsolete refrigerant · capacity wrong for the home (undersized / oversized).
- Comfort indicators: hot or cold rooms · humidity complaints · noise complaints · long run cycles.
- Financial indicators: high utility bills · recent expensive repairs · customer mentions "thinking about replacing."
- Decision indicators: decision-maker present · budget signal · urgency (no AC, no heat, refrigerant leak, failing compressor).
- If 3+ indicators across categories light up → FLIP, even if the 5-step script was only 3-of-5. The checklist breaks ties.

4 • Handoff workflow — Brayden runs this section

Hand the floor to Brayden for 6-8 minutes. He walks through what HE needs.

Brayden's talking points

- Slack #installs is the front door. Tag me directly: @Brayden. Don't post in #general, don't text. The channel is the source of truth.
- What I need in the message: customer name, address, system age, 1-line problem ("R-22 leaking, 14-yr Carrier 3-ton"), and your recommendation ("replace condenser + coil, possible full system").
- ServiceTitan side: create the estimate opportunity, attach 3+ photos minimum (outdoor unit nameplate, indoor coil, electrical panel). Set Lead Source = "Tech Generated." Flag self-sourced — that's your install credit.

- Hold the customer. My standard same-day window is 11 AM – 6 PM Mon-Fri. I'll confirm an ETA in Slack within 15 minutes. Stay warm with the customer until I commit to a time.
- Don't pre-quote. Don't say "this is going to be \$20k." That's my conversation. You're the trusted technician — keep that role.
- What kills a flip: packing up before I confirm, leaving the customer alone for 30 minutes, telling them "someone will call you" instead of holding for me.

Facilitation tip for Mark

After Brayden finishes, ask the techs: "What's one thing you weren't doing that you're going to start doing tomorrow?" Go around the room.

5 · Red Barn scenario — work it as a team

The setup

Tech runs maintenance on a 12-year-old Carrier system in a 2,400 sqft two-story home. Owner mentions \$380/month summer power bill and says "upstairs is always hot." Both spouses are home. System is original to the build. Refrigerant: R-410A, but coil is showing surface corrosion.

Walk the room through the 5 steps

- Step 1 — Age + condition: 12 years old, corrosion visible. → Hit.
- Step 2 — Staying in home: ASK THE QUESTION. Assume answer is "yes, this is our forever home." → Hit.
- Step 3 — Comfort/bill pain: \$380/mo summer bill + upstairs always hot. → Hit.
- Step 4 — Budget signal: ASK THE QUESTION. Don't skip. If they say "depends on the number" — that's still a yes. → Hit.
- Step 5 — Decision-makers present: Both spouses home. → Hit.
- Score: 5 of 5. This is a textbook FLIP. Not a lead.

What you do next

- Photos: outdoor nameplate, indoor coil (close-up of the corrosion), electrical panel.
- ServiceTitan: estimate opportunity, photos uploaded, Lead Source = Tech Generated, self-sourced flag.
- Slack #installs: "@Brayden — Anderson residence, 1247 Oak Hill Dr Marietta. 12-yr Carrier, R-410A, coil corrosion, \$380/mo summer bills, upstairs hot. Both DMs home. Recommend full system. Customer here for the next 90 min."
- Hold the customer. Walk the property with them. Ask about other comfort issues. Keep them engaged until Brayden's ETA lands.

6 · Pay impact — why this matters to YOU

Brayden and Mark co-deliver this. Money talks. Make it concrete.

Talking points

- Composite ST score weights install at 10% AND service revenue at 35%. Flips boost both.
 - Self-sourced install credit is what moves the needle on the 10% install component.
- Tech-Generated Leads that don't convert give you TGL count but no install credit until they close.

- Real example — Dewone, 4/27. Martha Futral install, \$24,316. Dewone qualified on-site, photographed, slacked Brayden, held the customer for 2 hours. Brayden closed same-day. That's a textbook FLIP. That install moved Dewone's April composite meaningfully.
- Counter-example — April team: 39 TGL, only 10 conversions. Most of the misses were leads that should have been flips, or flips that lost the customer because the tech packed up before Brayden confirmed.
- Tighten this and we get to 40%+ conversion. That's \$50K+ extra install revenue in May alone if we just hit the industry benchmark.

7 • Common mistakes to avoid

- Calling a service ticket a "lead" without capturing decision-maker status. Without DM info, Brayden can't qualify the follow-up.
- Flipping without warming the customer first. Don't surprise them with a salesperson — frame it: "I'd like to bring our install specialist out today; he'll give you options at no cost."
- Not staying on-site for the handoff. If you leave, the customer cools off. Stay until Brayden commits to a time.
- Missing photos in ServiceTitan. Brayden can't quote without seeing the equipment. No photos = no flip.
- Pre-quoting. "This is going to be like \$25,000" — never say it. Brayden quotes. You're the technician.
- Posting in the wrong Slack channel. #installs only. #general is for huddle and chatter.

8 • Close — go around the room

Each tech answers, on the record:

- What's one thing you weren't doing that you'll start doing this week?
- What's the question you most often skip on the 5-step script — and why?
- Who in the room is your accountability partner for FLIPs this week? (Pair them up.)

Wrap

"Two outcomes from every qualifying call: a Lead with full info, or a FLIP. If you leave without one of those two, we both lost. Pin the card. Run the script. Slack Brayden."

Post-meeting — facilitator actions

- Log attendance in Manager → Training → Wed 5/6 entry.
- Add 2-3 specific action items to the meeting notes (e.g., "Daniel + Benji each commit to 2 FLIPs this week").
- Schedule a 1-on-1 with anyone who couldn't recite the 5 steps from memory.
- Pull Friday's TGL → install conversion data and post the delta in Slack #installs.
- Re-run this training in 6 weeks if the team conversion rate hasn't moved past 35%.
